The global Charging Gun market size is predicted to grow from US\$ 3968 million in 2025 to US\$ 325922 million in 2032; it is expected to grow at a CAGR of 88.2% from 2026 to 2032.

In 2025, global Charging Gun production reached approximately 16.22 million units, with an average global market price of around US\$250 per unit.

A charging gun is the end connector (plug/handle and cable assembly) that interfaces between EV charging equipment and the vehicle inlet, enabling safe and stable power transfer and communication control during AC or DC charging. It typically integrates high-current conductive terminals, insulation and sealing structures, and safety elements such as temperature sensing and locking/interlock mechanisms, while using control pilot signaling for handshaking and protection to ensure reliable operation under frequent mating cycles and varied environments.

Upstream for charging guns includes conductive/contact materials (copper and copper alloys), engineering plastics and insulation materials (PA, PBT, PC), elastomers and sealing materials (silicone/EPDM), cable and jacket materials (copper conductors with TPE/PVC jackets), and electronic components such as temperature sensors and microswitches; midstream covers charging gun and cable assembly manufacturing, terminal crimping, overmolding, sealing, and reliability validation; downstream demand is driven by EVSE manufacturers and charging operators as well as vehicle OEM ecosystems. Representative upstream suppliers include copper/copper alloys (Aurubis; Tongling Nonferrous / Jiangxi Copper), engineering plastics (BASF, SABIC), cables (Prysmian, Nexans), and material suppliers for elastomers (Dow, Wacker). Representative downstream players include EVSE/charging (ABB, Siemens, ChargePoint) and OEM ecosystems (Tesla, BYD, VW Group).

The charging gun market is in a stage of rapid growth, mainly driven by the demand for new energy vehicles. Rising sales of electric vehicles amid increasing global concern for environmental issues and government support for reducing exhaust emissions, and demand for charging electric vehicles is also driving the charging gun market. Furthermore, the charging gun market is driven by government and private sector investments and developments in charging infrastructure. The government has introduced various incentive policies and subsidy measures to accelerate the construction of charging infrastructure, including charging piles and charging stations. This further drives the growth of the charging gun market, providing users with more charging options and convenience. Overall, the charging gun market is showing a booming growth trend, and due to the continuous growth in demand for new energy vehicles and the development of charging infrastructure, the market is expected to continue to expand and provide more innovative charging gun products to meet the growing charging needs of electric vehicle.
