The global Charging Port Flap market size is predicted to grow from US\$ 430 million in 2025 to US\$ 779 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

In 2025, global Charging Port Flap production reached approximately 20,000 K units, with an average global market price of around 22 US\$/unit.

Charging Port Flap refers to a specialized protective component installed on the charging port of electric vehicles (including electric cars, electric bikes, electric scooters) and electronic devices, designed to cover and seal the charging interface. It is usually made of durable materials such as plastic, rubber, or aluminum alloy, with waterproof, dustproof, anti-collision, and anti-corrosion functions, and can be designed as flip-type, push-type, or sliding-type according to product needs. Its core role is to protect the charging port from external pollutants, physical damage, and moisture intrusion, ensure the safety and stability of the charging process, extend the service life of the charging interface, and also maintain the overall appearance integrity of the device or vehicle.

The demand for Charging Port Flap is growing rapidly driven by the booming development of the new energy industry and the popularization of electronic devices: the global surge in electric vehicle ownership, the continuous expansion of the electric two-wheeler market, and the upgrading of electronic products have formed strong rigid demand; meanwhile, stricter industry standards for waterproof and dustproof performance of charging ports, as well as consumers' increasing attention to product durability and safety, further boost the demand for high-quality charging port flaps. Corresponding business opportunities are prominent: key opportunities lie in R&D and production of high-performance products (such as IP67/IP68 waterproof flaps) adapted to different types of vehicles and devices, customization services for new energy vehicle manufacturers and electronic product brands, replacement parts supply for after-sales

markets, and integration of intelligent functions (such as automatic opening/closing and fault reminder) to meet the upgrading needs of the market.
