The global Chassis Air Suspension market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Chassis air suspension refers to the suspension system that uses air springs and adjustable damping shock absorbers. Compared with the traditional steel suspension system, the advantage of air suspension is that it can make the bias frequency of the car's sprung mass under load. It remains relatively stable when changing, and at the same time automatically adjusts the spring stiffness and damping coefficient of the shock absorber to meet the requirements for vehicle handling or comfort in different situations.
