The global Chassis Domain Controller market size is predicted to grow from US\$ 200 million in 2025 to US\$ 295 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2025, global chassis domain controller production reached approximately 58 k units, the average price is 3500 usd/unit. The chassis domain can integrate various functions, such as air spring control, suspension damper control, rear wheel steering function, electronic stabilizer bar function, steering column position control function, etc. Combined with intelligent actuators, a chassis domain controller with enough computing power can support the integration of vehicle lateral, vertical, and vertical control functions such as vehicle braking, steering, and suspension.

Market Concentration and Key Players:

Internationally, the chassis domain controller market is highly concentrated, mainly concentrated in developed countries such as Europe, America and Japan. For example, Continental Group and ZF and other large manufacturers; from the domestic point of view, chassis domain controllers still have a lot of room for development.

Manufacturing Processes and Market Trends:

The core of the chassis domain controller manufacturing process lies in the deep integration of highly integrated hardware architecture and complex software algorithms. Its hardware adopts the main and auxiliary dual-chip redundancy design to ensure the highest level of functional safety ASIL-D. The main chip needs to meet the AEC-Q100 Grade1 reliability standard and work stably in the wide temperature range of -40 to 125

degrees Celsius. Meanwhile, dual-channel redundancy is adopted for power management, communication bus and key sensor interfaces to improve the fault tolerance capability of the system. The production process covers precision PCB mounting, multilayer board assembly and rigorous temperature cycle and vibration testing to ensure gauge level reliability. At the software level, software and hardware decoupling is realized according to AUTOSAR standard, longitudinal, lateral and vertical dynamics of vehicles are controlled cooperatively through integrated reinforcement learning, Kalman filtering and other algorithms, and OTA online upgrade is supported to realize continuous optimization of control strategy.

The market trend shows that with the evolution of intelligent electric vehicles to high-level automatic driving, the demand for chassis domain controllers has increased significantly. Its development revolves around the popularization of line control technology and the upgrading of central computing architecture. The localization substitution process has accelerated. Huawei, Weilai and other enterprises have realized mass production of full-stack self-research solutions. In the future, chassis domain controllers will deeply integrate chassis, power, intelligent driving and other cross-domain functions, gradually evolving into the vehicle's motion coordination center.
