Chatbot for Mental Health is a virtual dialogue system based on artificial intelligence (AI), natural language processing (NLP) and machine learning (ML) technologies, which aims to provide users with mental health support by simulating human dialogue. Its core functions include emotion recognition, emotional counseling, psychological education, crisis warning and preliminary psychological assessment. It can provide immediate response when users express emotional distress, and help users relieve psychological pressure through personalized suggestions or resource recommendations. Such robots are usually designed based on psychological theories (such as cognitive behavioral therapy CBT, mindfulness meditation, etc.), with advantages such as 24-hour online, anonymity, low cost and scalability, and are suitable for psychological support scenarios in resource-scarce or emergency situations.
