A chemical indicator for hydrogen peroxide is a testing tool designed for hydrogen peroxide sterilization processes, typically in the form of strips or films printed with reactive ink. These indicators react with hydrogen peroxide vapor or plasma during the sterilization process, causing a color change that signals whether sterilization has been successful. This provides a visual check for users to confirm that the sterilization process has been effective and meets safety standards. The technology is widely used in hospitals, laboratories, and other environments requiring high-standard disinfection.
