## Abstracts

The global Chemical Peptizer DBD market size is predicted to grow from US\$ 120 million in 2025 to US\$ 158 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

Chemical plasticizer DBD is a highly efficient and environmentally friendly rubber processing aid. It is mainly used in the high-temperature plasticizing of natural rubber and styrene-butadiene rubber (SBR), significantly reducing the viscosity of rubber molecular chains, shortening plasticizing time, and improving mixing efficiency. It is non-toxic and pollution-free, making it an ideal alternative to traditional pentachlorothiophenol plasticizers.

Upstream core raw materials include o-aminothiophenol, benzoyl chloride, and oxidants. The technological barrier in this stage lies in the precise synthesis of thioether bonds and the yield control of the oxidation reaction. The production process must achieve full solvent recycling to comply with low-carbon principles. Downstream applications are in the high-performance rubber products industry, especially in the manufacture of green tires, aircraft tires, and precision shock absorbers.

Global sales in 2025 were approximately 24,340 tons, with an average selling price of US\$5,028 per ton. The industry's gross profit margin was around 20%-25%.

United States market for Chemical Peptizer DBD is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
