Seals used in the chemical transportation industry are majorly made from either polytetrafluoroethylene (PTFE) or perfluoroelastomer (FFKM) or ethylene propylene diene monomer (EPDM). These materials provide exceptional durability, excellent wear resistance, and outstanding chemical resistance against a wide range of chemicals. These seals are mainly used in the form of o-rings and gaskets in tankers to prevent any non-accidental releases (NARs) during the time of chemical transportation. Stringent regulations to prevent non-accidental releases of chemicals during the transportation is a factor assuring a healthy demand for seals in chemical transportation.
