The Chemotherapy Scalp Cooling System is a device used to reduce hair loss during chemotherapy treatment. Scalp cooling is a proven approach to reduce chemotherapy-induced alopecia that has been used successfully by thousands of patients worldwide for decades. Reduced temperature results in a decreased blood flow to the scalp area so that less chemotherapy reaches the hair cells. Therefore, hair cells are not exposed to the full dose of chemotherapy and may be able to survive the chemotherapy treatment. As a result, hair is less likely to fall out.

The global Chemotherapy Scalp Cooling System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
