Chikungunya is a viral illness transmitted by mosquitoes that causes the sudden onset of fever and severe joint pain. Other signs and symptoms may include fatigue, muscle pain, headache and rash. Signs and symptoms of chikungunya usually appear within two to seven days after being bitten by an infected mosquito. No vaccine exists to prevent chikungunya fever, and there's no effective antiviral treatment. However, the disease runs a limited course and rarely causes serious complications. Treatment is aimed at relieving symptoms with rest, fluids and medications — such as acetaminophen (Tylenol, others) and ibuprofen (Advil, Motrin IB, others) — to relieve joint pain and fever.
