Child safety booster car seats are specialized car seats designed to enhance the safety of children during car travel. Typically used for older children who have outgrown traditional forward-facing car seats, booster seats are intended to position the child properly in the vehicle's seatbelt system. These seats lift the child to a height where the seatbelt fits correctly across the stronger parts of their body, such as the chest and hips, reducing the risk of injury in the event of a collision. Booster seats come in various designs, including high-back boosters with additional head and neck support and backless boosters for older children. They play a crucial role in providing age-appropriate protection for children until they are tall enough to use the vehicle's seatbelt without assistance. Booster seats are an essential component of child passenger safety, helping to reduce the severity of injuries in the event of a crash.
