Child safety socket is a socket to prevent electric shock for underage children, which is specially designed to protect the safety of children's electricity. The working principle of this product is to ensure that each jack is de-energized before being inserted into the electrical plug under the power-on state. It can intelligently identify whether the insert is an electrical plug. The jack will only be inserted when the L and N poles are inserted at the same time. Power is applied, so inserting either pole alone will not cause electric shock.
