The global Children Myopia Control Lens market size is predicted to grow from US\$ 1641 million in 2025 to US\$ 4939 million in 2032; it is expected to grow at a CAGR of 17.4% from 2026 to 2032.

Myopia, also called near-sightedness or short-sightedness, is a problem with the focusing ability of the eye. It is when the eye is not able to focus properly on objects in the distance. In this study, Myopia Control Spectacle Lenses, such as ZEISS MyoVision Pro Lenses, HOYA MiyoSmart and Essilor® Stellest™ etc. and Myopia Control Contact Lenses (Orthokeratology Lens and Multi-focals (like MiSight)) are focused.

The myopia control lens industry is continuously evolving to address the increasing prevalence of myopia and the growing demand for effective solutions. Several solutions and innovations are being developed and implemented to tackle the challenge of myopia progression.

Specialized Lens Designs: Manufacturers are developing specialized lens designs specifically tailored for myopia control. These lenses employ various optical techniques, such as multifocal optics, peripheral defocus management, and dual-focus designs, to reduce the progression of myopia. These innovative designs aim to optimize visual performance while simultaneously slowing down the elongation of the eye, which is the underlying cause of myopia.

Orthokeratology (Ortho-K): Orthokeratology is a non-surgical method of myopia control that involves wearing specially designed gas-permeable contact lenses overnight. These lenses reshape the cornea temporarily, providing clear vision during the day without the need for glasses or contact lenses. Ortho-K lenses are particularly popular

among children and teenagers as they offer a convenient and reversible option for myopia management.

Soft contact lenses offer an alternative option to spectacles for correcting vision. They are made from a flexible clear oxygen permeable material and fit to closely align with the front surface of the eye. Not all of these myopia control soft contact lenses are available in all countries or eye care practices. A further consideration is local regulatory approvals - in the USA for example contact lenses are approved for use by the Federal Drugs and Administration (FDA). Myopia control contact lenses can be prescribed without FDA approval as "off-label" use, but FDA approval provides assurance that a lens has been extensively tested and approved for safety and effectiveness. Currently the CooperVision MiSight 1 day lens is the only myopia control soft contact lens to have FDA approval.

According to the report, the global Myopia Control Lens market was 1.08 billion US\$ in 2022 and is expected to 3.21 billion US\$ by the end of 2029, growing at a CAGR of 16.75% between 2023 and 2029.

Asia-Pacific is the largest consumption region of Myopia Control Lens, with 87.67% global revenue market share in 2022. China is the country with the largest contribution in the Asia-Pacific region. In 2022, the revenue share of myopia control lenses accounted for 72.79% of the Asia-Pacific region.

Market competition is intense. ZEISS, HOYA Corporation, EssilorLuxottica, CooperVision, Ovctek, Alpha Corporation, EUCLID and Brighten Optix are the leaders of the industry, and hold key technologies and customers, have been formed in the monopoly position in the industry. However, with further expanding market, there will be more manufactures in the future. Of the major players in this market, HOYA hold the largest market share in 2022, followed by ZEISS, EssilorLuxottica and CooperVision. HOYA occupied 30.74% global revenue market share in 2022. ZEISS, EssilorLuxottica and CooperVision occupied 15.70%, 12.07% and 11.34%, respectively.
