The global Children's LED Night Light market size is predicted to grow from US\$ 864 million in 2025 to US\$ 1335 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

A Children's LED Night Light is a specialized lighting device designed specifically for children. It uses Light - Emitting Diodes (LEDs) as the light source, which are known for their energy - efficiency, long lifespan, and ability to produce a soft, non - harsh light. These night lights are typically used in children's bedrooms, nurseries, or playrooms to provide a gentle glow during the night. They are often designed with child - friendly features such as colorful and cute shapes, animal or character motifs, and may also include additional functions like adjustable brightness, timer settings, or soft music to soothe children and help them feel more comfortable and secure in the dark.

Upgraded maternal and infant consumption drives growth: A new generation of parents is more concerned about their children's sleep environment and safety, and are willing to pay for night lights with beautiful designs, eco-friendly materials, and soothing features.

The rise of smart and interactive features: Smart children's night lights with sensor control, night light modes, music/story playback, and even mood lighting are becoming a new growth point in the market.

Stringent safety and material requirements: Consumers are highly concerned about product material safety (no flicker, no blue light hazards, no sharp corners, and fireproof materials), pushing brands to improve product standards.

Design drives purchasing decisions: Appearance design factors such as cartoon characters, IP collaborations, and soft colors significantly influence parents' purchasing behavior, especially on platforms like Xiaohongshu and Amazon.

Online channels dominate: E-commerce platforms such as Amazon, Tmall, and JD.com are the primary sales channels, with brands relying on visual marketing and user reviews to attract traffic and conversions.
