Abstracts

The global Children's Math's Education Franchise market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

A Children's Math Education Franchise is a business model that offers math education programs and services specifically designed for children. These franchises typically provide math tutoring, enrichment programs, and educational materials to help children develop their math skills and improve their understanding of mathematical concepts.

These franchises often use a structured curriculum and teaching methods that are tailored to the needs and learning styles of children. They may offer individual or group tutoring sessions, after-school programs, summer camps, and online learning platforms.

Children's Math Education Franchises can be operated by individuals or organizations who are passionate about math education and want to make a positive impact on children's learning experiences. Franchisees typically receive training and support from the franchisor, including access to curriculum materials, marketing resources, and ongoing professional development opportunities.

Some well-known examples of Children's Math Education Franchises include Kumon, Mathnasium, and Eye Level Learning. These franchises have established brand recognition and proven business models, making them attractive options for entrepreneurs interested in the education sector.

According to World Bank statistics, the global birth rate in 2021 was about 1.7%. Although the population growth rate had slowed down, with the development of the

world economy and the increase of per capita disposable income of residents, the spending power is growing. Therefore, there is still a large room for development in the baby products industry. Improving product quality and tapping the value of a single customer will become the drivers for the growth of the infant and child industry. Refinement and diversification are the core characteristics of the consumer demand. China has a large population base, and even if the population growth rate slows down, there will still be a demographic dividend. The State Council in 2022 proposes to 'Guide market players to produce safer and healthier domestic infant products'. According to the National Bureau of Statistics, China's birth rate in 2022 was 6.77%, and the birth population was 9.56 million. According to the results of the seventh national census in 2021, the number of infants and young children aged 0-6 in China reached 140 million, of which the number of infants and young children aged 3-6 exceeded 70 million. The huge population size has brewed a market demand with huge potential, and the children's consumption market has risen rapidly. Chinese families spend a lot on childcare, with the average cost of childcare ranking second in the world. The survey data released by China Research Center for Children's Industry shows that in 80% of families in China, children's expenditures account for 30% to 50% of household expenditures, and the average annual consumption of children in families is ?17,000 to 25,500. According to data from the Yuwa Population Research, the national average cost of raising a child (the cost of raising a child to the age of 18) is ?485,218. From the perspective of specific stages, the largest proportion is the cost of raising children aged 6-14, accounting for about 45%. The cost during pregnancy, the cost of childbirth and confinement, and the cost of raising babies aged 0-2 accounted for 2.06%, 2.09% and 13.33% separately.
