Chilled mirror dew point meter is a high-precision instrument for measuring the dew point temperature of water vapor in the gas. It uses mirror cooling technology to gradually reduce the temperature of the mirror until condensation drops appear on the mirror. The temperature at this time is the dew point temperature of the gas being measured. Chilled mirror dew point meters are widely used in meteorological observation, industrial process control, environmental monitoring and scientific research experiments due to their characteristics of accurate measurement, rapid response and good repeatability, especially when precise humidity control or trace analysis of gases is required. Moisture plays an important role in situations.
