Chilled water and glycol coils are finned-tube heat exchangers used in HVAC and industrial cooling systems, where chilled water or glycol solution circulates inside the tubes to absorb heat from passing air, enabling air cooling, dehumidification, or process temperature control. Glycol coils are specifically applied in low-temperature or anti-freeze environments to prevent system freezing and ensure stable operation.

Upstream mainly consists of suppliers of copper tubes, aluminum fins, steel materials, anti-corrosion coatings, and glycol fluids; the midstream involves coil design, heat transfer engineering, manufacturing, and customized assembly; downstream applications are concentrated in HVAC equipment manufacturers, data centers, commercial buildings, industrial plants, cold-chain logistics facilities, and energy and chemical end users.

United States market for Chilled Water and Glycol Coil is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
