A chilly stem cutting machine is a type of agricultural equipment used to remove the stems from chili peppers. This machine is designed to automate the process of stem removal, which is a necessary step in chili processing before the peppers can be used in various food products or sold in the market. The machine typically works by feeding whole chili peppers into a hopper or inlet, where they are then transported through a series of mechanisms that cut or break off the stems, leaving the pepper pods stemless. The stemless peppers are then collected for further processing, such as drying, grinding, or packaging. Chilly stem cutting machines come in various sizes and capacities, ranging from small-scale models suitable for home use or small businesses to large industrial machines capable of processing tons of chili peppers per hour. The choice of machine depends on the volume of chili peppers to be processed and the specific requirements of the operation.

The global Chilly Stem Cutting Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
