A Chinese Burner Stove is a type of cooking appliance specifically designed for cooking with a wok. It is characterized by its high heat output and a large, round burner that is ideal for the rapid stir-frying and high-heat cooking techniques commonly used in Chinese cuisine. These stoves are often found in Chinese restaurants and commercial kitchens, as well as in the homes of enthusiasts of Chinese cooking. They are typically powered by gas, either natural gas or propane, and are designed to concentrate heat at the center of the wok, which is essential for achieving the searing temperatures required for authentic stir-fries. Chinese burner stoves can have one or more burners, with the single-burner models being the most common for home use. The burners are usually situated in a hole in the countertop, with the wok resting directly over the flame. The design allows for easy access to the wok's contents and efficient heat transfer.
