## Abstracts

The global Chip Common Mode Inductor market size is predicted to grow from US\$ 6583 million in 2025 to US\$ 12390 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

SMD common mode inductors, also called common mode chokes, common mode coils, or common mode choke coils, are commonly used in computer switching power supplies to filter common mode electromagnetic interference signals. SMD common mode coils and SMD common mode inductors use high-frequency noise suppression measures, common mode choke coil structure, no signal attenuation, small size, and easy to use.

The Asia-Pacific region holds the largest share of the global SMD common-mode inductor market. This is mainly due to the rapid development of the electronics industry and the huge market demand in the region. Countries such as China, Japan, and South Korea have a leading position in the electronics industry, and the demand for SMD common-mode inductors continues to grow. Although North America and Europe have relatively small market shares, they are still important components of the global SMD common-mode inductor market.
