The global Chitosan Antibacterial Fabric market size is predicted to grow from US\$ 2361 million in 2025 to US\$ 5278 million in 2032; it is expected to grow at a CAGR of 12.2% from 2026 to 2032.

Chitosan antibacterial fabrics use cotton, polyester, nylon, or viscose fabrics as the base material, incorporating chitosan antibacterial finishing agents through padding, coating, or blending. This gives the fabrics long-lasting antibacterial properties, skin-friendly safety, and a certain degree of biodegradability, making them widely used in medical textiles, functional clothing, home textiles, and public health fields. The upstream raw materials mainly include chitosan powder, textile base fabric, crosslinking agents, and auxiliaries. Downstream suppliers are primarily medical dressing and surgical textile companies, functional clothing brands, and home textile companies. Demand and opportunity analysis shows that the normalization of antibacterial protection needs in the post-pandemic era, coupled with the increased medical needs due to aging, and the continued strengthening of green and sustainable textile trends, are driving the accelerated penetration of chitosan antibacterial fabrics in high-end medical, maternal and infant products, and functional home textile fields. These fabrics are expected to maintain stable growth and high added value potential over the next five years.
