Chitosan Fining Agent is a natural polysaccharide obtained from chitin by deacetylation and is biocompatible, biodegradable and non-toxic, while possessing some antimicrobial properties. In wine production, chitosan Fining Agent are used as an alternative to traditional bentonite clay as a downgauging agent to improve the thermal stability of wines and to reduce the content of proteins and organic acids, while having a low impact on the color and volatile compounds of the wine. In addition, chitosan Fining Agent have applications in other non-alcoholic beverages, such as as clarifiers for fruit juices. It is important to note that the use of chitosan clarifiers in beverages needs to comply with local regulations and standards, e.g. in the European Union, only chitosan from certain fungi is allowed for wine production.
