The global (Chloro)-Dimethylsilane market size is predicted to grow from US$ 15.9 million in 2025 to US$ 20.4 million in 2031; it is expected to grow at a CAGR of 4.3% from 2025 to 2031.

(Chloro)-dimethylsilane (CAS 1066-35-9) is an organic silicon substance. It is soluble in aromatic hydrocarbons and petroleum hydrocarbon solvents. When encountering with water or alcohol, it undergoes decomposition drastically. The product analysis is gas chromatography

Chlorodimethylsilane is a highly volatile and extremely flammable liquid. It reacts violently with water, rapidly breaking down to give dimethylsilanol and then dimethylsilanediol. The by-products of these reactions are hydrogen chloride and hydrogen; hydrogen is an extremely flammable gas.

The substance is not suitable for use by the general public. The applications described take place in industrial settings or academic laboratories under highly controlled conditions. Although the end uses of products made from chlorodimethylsilane will vary, it can be assumed that due to its highly reactive nature, no residual unreacted material will be present in any of the final products.

Global (Chloro)-Dimethylsilane (CAS 1066-35-9) key players include DuPont, PCC Group, Jiande Zhiyou Silicone Materials, Shanghai Chuqing Organosilane, etc. Global top four manufacturers hold a share over 95%.
