Chloro Fatty Acid Methyl Esters are a novel, environmentally friendly plasticizer widely used in organic resins and UV-curable materials. Made from natural oils, they are highly compatible with polyvinyl chloride (PVC) and possess excellent plasticizing, flame-retardant, and environmentally friendly properties.They are synthesized from vegetable oils through processes such as esterification and chloromethoxylation. It is a slightly yellow, transparent, oily liquid that improves the flexibility and processing properties of plastics such as PVC. Due to its non-toxic and environmentally friendly characteristics, it is used as a substitute for traditional phthalate plasticizers and chlorinated paraffins.

Global sales volume in 2024 was approximately 210,000 tons, with an average market price of approximately US$900 per ton. The size of a single production line varies depending on the production process and investment scale. Industry gross profit margins range from 15% to 30%.
