The global Chlorophyll Sensors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Chlorophyll is one of the important components of algae, and all algae contain chlorophyll a. The level of chlorophyll-a content is closely related to the type and quantity of algae in the water body, and is also related to the quality of the water environment. Therefore, the determination of chlorophyll-a content in water can reflect the water quality to a certain extent. In recent years, chlorophyll is also playing an increasingly significant role in the evaluation of eutrophication in water bodies.
