The global CHO Residual DNA Detection Kit market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Residual host cell DNA in biological products will bring risks of immunogenicity, tumorigenicity and infectivity. Probe hybridization and fluorescent dye methods can no longer meet the requirements of product quality control and are gradually being eliminated by the pharmacopoeias of developed countries. The CHO Residual DNA Detection Kit uses the principle of Taqman probe fluorescent quantitative PCR, which can quantitatively detect the residual CHO host cell DNA in biological product samples.

CHO Residual DNA Detection Kit is a special kit for quantitative detection of CHO host cell DNA residues in intermediates, semi-finished products and finished products of various biological products. This kit uses the principle of TaqMan fluorescent probe to quantitatively detect CHO residual DNA in samples. The detection is fast, the specificity is strong, the performance is reliable, and the minimum detection limit can reach the fg level.
