The global Chopped and Milled Fiberglass market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Both chopped and milled fiberglass offer excellent strength-to-weight ratio, corrosion resistance, and electrical insulation properties. They can be easily mixed or dispersed into various matrix materials, allowing for the creation of custom composite materials with specific mechanical and performance characteristics.

It is important to note that when working with fiberglass materials, proper safety precautions should be followed, including wearing protective clothing, gloves, and a respirator, as fiberglass particles can cause irritation to the skin, eyes, and respiratory system if inhaled or come into contact with bare skin.

Chopped and milled fiberglass are two forms of fiberglass material that are commonly used in various industries for their strength, durability, and versatility.

Chopped fiberglass: Chopped fiberglass consists of short lengths of fiberglass strands or rovings that have been cut into specified lengths. These strands are typically bound together using a binder material, such as an emulsion or a powder, to form a loose fiber mat or a preformed shape. Chopped fiberglass is often used as a reinforcing material in composite structures, where it provides strength and stiffness to the finished product. It is commonly used in applications such as automotive parts, boat hulls, pipes, and construction materials.

Milled fiberglass: Milled fiberglass, also known as fiberglass powder or fiberglass filler, is produced by grinding or milling continuous fiberglass strands into fine particles. The resulting fiberglass powder has a fine texture and can be mixed with various resins, polymers, or other materials to enhance their mechanical properties. Milled fiberglass is often used as a filler or additive in composites, coatings, adhesives, and plastics to improve strength, impact resistance, dimensional stability, and surface finish. It can also be used in applications such as lightweight panels, insulation materials, and corrosion-resistant coatings.
