This report focuses on Christmas Tree System market.

In petroleum and natural gas extraction, a Christmas tree, or 'tree', is an assembly of valves, spools, and fittings used to regulate the flow of pipes in an oil well, gas well, water injection well, water disposal well, gas injection well, condensate well and other types of wells. It was named for its resemblance to the series of starting lights at a drag racing strip (Christmas tree (drag racing)).

Christmas trees are used on both surface and subsea wells. It is common to identify the type of tree as either 'subsea tree' or 'surface tree'. Each of these classifications has a number of variations. Examples of subsea include conventional, dual bore, mono bore, TFL (through flow line), horizontal, mudline, mudline horizontal, side valve, and TBT (through-bore tree) trees. The deepest installed subsea tree is in the Gulf of Mexico at approximately 9,000 feet (2,700 m). (Current technical limits are up to around 3000 metres and working temperatures of -50 °F to 350 °F with a pressure of up to 15,000 psi.)
