The global Chromate-free Electrogalvanized Steel Sheet market size is predicted to grow from US\$ 29348 million in 2025 to US\$ 40454 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Chromate-free electrogalvanized steel sheet refers to a cold-rolled steel substrate coated with a zinc layer through an electrogalvanizing process, followed by a post-treatment that does not use hexavalent chromium (Cr⁶⁺) or traditional chromate-based passivation. Instead, environmentally friendly conversion coatings such as zirconium-based, titanium-based, silicate-based, or organic-inorganic hybrid films are applied to achieve corrosion resistance and surface protection. This material is designed to comply with environmental regulations such as RoHS and REACH, and is widely used in automotive panels, home appliances, and electronic housings where both corrosion resistance and environmental safety are required.

In 2025, global production of chromate-free electrogalvanized steel sheet is 25 million tons, with an average price of around \$1,200 per ton. Compared with conventional electrogalvanized steel, the price premium is relatively limited; however, within automotive certification systems, it can enable a gross margin level of approximately 12-25%.

United States market for Chromate-free Electrogalvanized Steel Sheet is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
