The global Chromatography Grade Cyclohexane market size is predicted to grow from US\$ 117 million in 2025 to US\$ 148 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

Chromatographic grade cyclohexane refers to a high-purity cyclohexane product specifically designed for gas chromatography (GC), high-performance liquid chromatography (HPLC), gas chromatography-mass spectrometry (GC-MS), thin-layer chromatography (TLC), and sample pretreatment analysis. This product undergoes multi-stage distillation, deep dehydration, ultrapure filtration, and strict impurity control processes, resulting in extremely low levels of aromatic hydrocarbon impurities, moisture, non-volatile residues, and chromatographic background interference, ensuring the accuracy, sensitivity, and repeatability of analytical results.

The upstream of the industry chain mainly includes industrial-grade cyclohexane feedstock produced by benzene hydrogenation, as well as distillation equipment, molecular sieve dehydration systems, ultrapure filtration devices, high-cleanliness packaging materials, and analytical instruments. High-purity cyclohexane produced by petrochemical companies is the primary source of feedstock. The midstream involves the purification and packaging of chromatographic-grade cyclohexane. Through multi-stage distillation, deep dehydration, removal of aromatic hydrocarbon impurities, control of non-volatile residues, and clean filling processes, industrial-grade cyclohexane is purified to a high-purity solvent product that meets the requirements of GC, HPLC, GC-MS, and pesticide residue analysis. Downstream applications are widely used in gas chromatography (GC), high-performance liquid chromatography (HPLC), and gas chromatography-mass spectrometry (GC-MS) analytical systems, primarily serving food safety analysis, environmental pollutant monitoring, raw material impurity analysis,

petrochemical testing, third-party testing institutions, and university research laboratories.

In 2025, global sales of chromatographic grade cyclohexane reached 3.5 million liters, with a production capacity of approximately 4.9 million liters, an average selling price of US\$34.3 per liter, and an average gross profit margin of 30%-40%.

The continuously increasing demands for global food safety regulations, environmental protection regulations, and pharmaceutical quality supervision provide long-term support for the high-purity chromatography solvent market. Major markets such as the EU, the US, China, and Japan are constantly raising pesticide residue limits and environmental pollutant testing requirements, driving increased demand for high-purity analytical solvents in laboratories. Simultaneously, the widespread adoption of the ISO/IEC 17025 laboratory accreditation system and the upgrading of GMP standards in the pharmaceutical industry have also promoted the application of high-end chromatography-grade cyclohexane products. In recent years, the construction of green laboratories and the concept of sustainable development have gradually influenced solvent selection and production process optimization.
