Chromatography vials are used for the storage and packaging of chemical substances. Government regulators and labs that control food safety uses chromatography vials for the testing of food. Chromatography vials have a wide opening with crimp neck that helps in safe handling and holding. Chromatography vials are commonly used as a temporary container for the storage of the sample until it is utilized for gas or liquid chromatography. The chemical industry uses chromatography vials for the storage of small volume of chemicals. It is manufactured from borosilicate glass so that it can withstand high temperature as compared to other regular glass. The manufacturers of chromatography vials are working on R&D and innovation to provide sterile and durable vials to end users like life science, diagnostic, and labs.
