The global Chromium-free Passivation Solution market size is predicted to grow from US$ 590 million in 2025 to US$ 975 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2024, global Chromium-free Passivation Solution production reached approximately 191.5 k ton, with an average global market price of around US$ 2937 per ton. A chromium-free passivation solution is a novel metal surface treatment chemical that is free from chromium substances, such as hexavalent chromium (Cr??) or trivalent chromium (Cr??). It is used to replace traditional chromate conversion coatings by forming a dense protective conversion film on metals (e.g., galvanized steel, aluminum alloy, magnesium alloy). Its core components typically include environmentally friendly compounds like molybdates, zirconates, titanates, silanes, rare earth metal salts, or organic polymers. This conversion film effectively isolates the metal substrate from corrosive media, provides excellent corrosion resistance, and serves as a base for painting, meeting the stringent requirements of modern industry for environmental protection, health, and safety (EHS). The single line production capacity of Chromium-free Passivation Solution is about 5000 tons, and the industry gross profit margin is approximately 22% -30%.

United States market for Chromium-free Passivation Solution is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Chromium-free Passivation Solution is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
