Abstracts

The global Chromium–alumina Catalysts market size is predicted to grow from US$ 338 million in 2025 to US$ 506 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2024, global production of Chromium–alumina catalyst reached approximately 400 kilotons, with an average global market price of around USD 820 per ton. A Chromium–alumina catalyst is a heterogeneous catalytic material composed of chromium oxides supported on an alumina (Al?O?) substrate, widely used in petrochemical and chemical industries. The chromium component, often present as Cr?O? or in mixed oxidation states, provides active sites for dehydrogenation, oxidation, and polymerization reactions, while the alumina support offers high surface area, thermal stability, and mechanical strength. These catalysts are most notably employed in the production of ethylene from ethane and propane dehydrogenation, as well as in olefin polymerization processes and selective oxidation reactions. Their performance depends on chromium loading, oxidation state, dispersion on alumina, and preparation method, making them a versatile platform for high-temperature catalytic applications.

United States market for Chromium–alumina Catalysts is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Chromium–alumina Catalysts is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Chromium–alumina Catalysts is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
