Chromogenic Medium Plate is a medium plate that detects microorganisms by using the principle that the enzymes produced by the metabolism of microorganisms react with the corresponding chromogenic substrates to develop color. It is a fast, accurate and easy-to-operate microbial detection and identification tool. The chromogenic substrate consists of chromogenic genes and some metabolizable substances of microorganisms. Under the action of specific enzymes, the chromogenic genes are released and a certain color is displayed. It can be used for microbial detection and identification in many fields such as clinical medicine, food testing, and environmental protection.
