Chufa is an exponentially-growing perennial grass-like plant from the rush family and is certainly cultivated in warm climates in moist & wet soils. The small round tubers found along the roots have a slight almond flavor and are eaten raw or cooked, or made into a traditional chufa drink called horchata. The plant's tubers comprehend high levels of protein, carbohydrate and oleic acid, and 20 to 28 percent of their mass in the form of a non-drying oil. The oil is obtained by pressing the cleaned tubers, in the same manner as traditional olive oil extraction. The oil has a mild, pleasant flavor and is considered as a food oil to be similar, but of superior quality, to olive oil. Industrial applications for the oil include high-value applications for cosmetics and instrument lubricants.
