The research report highlights the growth potential of the global CIGS Thin Film Solar Cell market. CIGS Thin Film Solar Cell are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of CIGS Thin Film Solar Cell. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the CIGS Thin Film Solar Cell market.

CIGS Thin Film Solar Cell refers to a type of photovoltaic cell that utilizes a thin film of copper indium gallium selenide (CIGS) semiconductor material to convert sunlight into electricity. CIGS is a compound that has excellent light absorption properties, allowing for efficient energy conversion. The thin film solar cells are created by depositing thin layers of CIGS material onto a substrate such as glass or flexible material. CIGS Thin Film Solar Cells offer advantages like high efficiency, potential for flexible and lightweight designs, and lower manufacturing costs compared to traditional silicon-based solar cells.

It is expected that global demand for photovoltaic products will remain high in the next few years. According to our PV & Solar Research Center, by the end of 2022, the global

cumulative installed photovoltaic power generation capacity is about 1180 GW. According to the data of China Photovoltaic Industry Association, the global newly installed photovoltaic capacity in 2022 is about 230 GW, and this number in 2023 is predicted to be 280-330 GW. According to the data of the Ministry of Industry and Information Technology, the total output value of China's photovoltaic industry exceeded 1.4 trillion yuan in 2022. From the perspective of production value, mainland China is still the global center of the PV industry. According to the International Energy Agency, China market share in all key products of the supply chain have exceeded 80%. Among them, the production capacity of silicon wafers, solar cells, and components accounts for as high as 98%, 85% and 77%, respectively. According to the data released by the European Photovoltaic Association, 27 EU countries gained a new PV installed capacity of 41.4 GW in 2022. According to the report of the US Solar Energy Industries Association (SEIA), the US held a new PV installed capacity of less than 19 GW in 2022. But it is estimated that from 2023, the average annual growth rate of new photovoltaic installed capacity will exceed 21%. In terms of Japan, based on data from Fitch and the US Energy Information Administration (EIA), in 2022, Japan's newly installed photovoltaic capacity was 3.239 GW.
