Cinnamonnitrile is an excellent synthetic spice. Its aroma is very similar to natural cinnamon, with a strong spicy floral aroma. Especially when used in alkaline media, it shows its advantages of high strength, stable performance and good durability. It is also good for the skin. Cinnamaldehyde has no irritating or allergic effects and is widely used in spices. However, cinnamaldehyde is unstable when released into the air and is easily oxidized and discolored. It is even more unstable under the action of hot alkali. The aroma of cinnamonnitrile is similar to cinnamic aldehyde, but it is very stable, stable to light, heat, acid, and alkali, does not oxidize, does not change color, and can maintain the original aroma and color. It is an excellent substitute for cinnamic aldehyde.
