CIP/SIP system is an important cleaning equipment in the pharmaceutical, food and other industries. Through the automated cleaning and sterilization process, it ensures the hygienic standards of the production environment and the sterility of the product, improves production efficiency, reduces the risk of contamination, and ensures the cleaning effect. Without dismantling the equipment or production line, the CIP system transports the cleaning liquid to the inside of the equipment through a closed pipeline for spray circulation cleaning to remove dirt, residues and microorganisms attached to the inside of the equipment. It mainly includes cleaning liquid storage tanks, pumps, valves, pipes, nozzles and control units. Without dismantling the equipment or production line, the SIP system sterilizes by supplying high-temperature steam or other sterilizing agents to the inside of the equipment to kill the microorganisms attached to the inside of the equipment and ensure the sterility of the product.

United States market for CIP/SIP System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
