Abstracts

According to this study, the global CircRNA Sequencing Service market size will reach US\$ 999 million by 2031.

CircRNA Sequencing Service is a specialized high-throughput sequencing solution designed to identify and analyze circular RNAs (circRNAs), a class of non-coding RNAs with covalently closed loop structures formed by back-splicing. Lacking poly-A tails and exhibiting high stability, circRNAs are abundant in eukaryotic transcriptomes and play significant roles in gene regulation and disease development. This service typically involves pre-treatment steps such as rRNA depletion and RNase R digestion to enrich circRNAs, followed by sequencing using Illumina or long-read platforms. CircRNA sequencing is widely applied in oncology, neurodegenerative diseases, cardiovascular research, and stem cell studies, offering insights into novel biomarkers and molecular mechanisms, and serving as a crucial tool in non-coding RNA research and translational medicine.

United States market for CircRNA Sequencing Service is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for CircRNA Sequencing Service is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
