The global Circuit Breaker Release market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A circuit breaker release is an additional device used in electrical systems to remotely trigger the switching operation of a circuit breaker. It uses an external signal or control circuit so that the circuit breaker can be opened quickly to cut off the circuit when needed.

The working process of the circuit breaker release: remote triggering, magnetic field action, disconnecting the circuit. Features of circuit breaker releases: remote operation, safety protection, automatic control. When installing and using the circuit breaker release, it is necessary to select the appropriate model and specification of the circuit breaker release according to the specific electrical system requirements to ensure good compatibility with the circuit breaker. In addition, since the circuit breaker tripper involves electrical operation, please ensure that the operator has relevant electrical knowledge and skills to ensure the safety and reliability of the operation.
