The global Circular Centrifugal Duct Fan market size is predicted to grow from US\$ 111 million in 2025 to US\$ 143 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

In 2025, the global production of circular centrifugal duct fans reached 1.1351 million units, with an average selling price of US\$100 per unit. The global annual production capacity of circular centrifugal duct fans was approximately 1.7 million units, with a gross profit margin of approximately 22.6%. Circular centrifugal duct fans are commonly used for ventilation and air transport. Due to their unique structure and working principle, they are widely used in industrial and commercial buildings. The upstream of the circular centrifugal duct fan industry includes metal materials, motors, and impeller blanks. The midstream consists of circular centrifugal duct fan manufacturers, while the downstream applications are mainly in industrial, residential, and commercial sectors.

Currently, the market for circular centrifugal duct fans is generally characterized by ?stable demand, intensified competition, and accelerated product iteration.? On the one hand, as the penetration rate of building ventilation and air conditioning systems in residential buildings, commercial complexes, and industrial plants increases, duct centrifugal fans continue to receive orders due to their advantages such as relatively controllable noise, good compatibility with pipelines, and the ability to achieve higher static pressure. On the other hand, price competition due to industry homogenization is evident, with leading manufacturers having advantages in motor efficiency, impeller technology, airflow/static pressure matching accuracy, and intelligent control (such as frequency conversion and remote monitoring), driving the upgrade of mid-to-low-end products towards higher energy efficiency, lower noise, and customization. Overall, the market is shifting from ?selling airflow? to ?system energy consumption and

comprehensive performance, and future growth will depend more on upgrades to energy-saving standards and high-quality renovations of engineering projects.
