A circular overhead travelling crane is a crane that travels in a circular path around a central axis. A circular overhead travelling crane is mounted on a circular track system and consists of a trolley that moves along the track, supporting a hoist that can lift and move heavy loads. The trolley is driven by an operator-controlled motor. Circular overhead travelling cranes offer a complete 360-degree range of motion, allowing the operator to easily place heavy loads anywhere in the working area. This type of crane is often used in manufacturing and construction industries where heavy loads need to be moved over a wide area.
