The global Circulating Laboratory Chiller market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Laboratory chiller, also known as chiller laboratory equipment or laboratory-scale chiller, is a cooling water device that can provide constant temperature, constant current, and constant pressure. This laboratory device cools materials by removing heat from liquids through vapor compression or absorption refrigeration cycles. Years ago, experimenters relied on materials such as water, ice, dry ice, and liquid nitrogen for quick and easy water cooling in the lab. Although these methods are cost-effective, they are not that convenient.
