The global Circulating Tumor Cell Kit market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Circulating tumor cells are malignant tumor cells that originate from primary tumors and enter the systemic circulation. Detection of these cells in blood or other body fluids can help doctors diagnose tumors, assess disease progression, and predict treatment effects.

Circulating Tumor Cell Kit is a kit for the detection and analysis of circulating tumor cells (CTCs) in body fluids. Circulating Tumor Cell Kits typically include specific reagents and equipment for capturing, detecting, and analyzing circulating tumor cells. These kits can separate circulating tumor cells from body fluid samples through different technologies, such as immunomagnetic bead sorting, cell surface labeling, etc., and conduct further molecular biology or cytology analysis.

United States market for Circulating Tumor Cell Kit is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
