The global Circulating Tumor Cell(CTC)Detection market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The free tumor cell (CTC) test is a method used to detect and analyze tumor cells circulating in the blood. CTCs are cancer cells that fall off from the primary tumor and enter the blood circulation. By detecting these cells, important information about cancer progression, metastasis risk, and treatment efficacy can be provided. CTC detection is a non-invasive liquid biopsy technology that can monitor the development of cancer in real time and help doctors optimize personalized treatment plans. It is particularly suitable for early diagnosis of cancer, prediction of recurrence, and efficacy evaluation.

United States market for Circulating Tumor Cell(CTC)Detection is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
