Abstracts

The global CIS 1,4- Polyisoprene Rubber market size is predicted to grow from US\$ 1601 million in 2025 to US\$ 1966 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

In 2025, global Cis-1,4-polyisoprene production reached approximately 645 k tons, with an average global market price of around US\$2,538 per ton. Cis-1,4-polyisoprene is a natural or synthetic elastomer (rubber) where isoprene monomers link together with a specific 'cis' configuration, giving it excellent elasticity, high tensile strength, and flexibility, making it the primary component of natural rubber and a key synthetic mimic used in products like tires, gloves, and adhesives, known for its ability to stretch and return to shape.

The global market for cis-1,4-polyisoprene rubber (isoprene rubber) develops steadily. As the synthetic material whose properties most closely resemble those of natural rubber, its primary demand is concentrated in the tire manufacturing industry. The market is currently dominated by large international chemical companies, with production capacity focused in Europe, North America, and the Asia-Pacific region, indicating a high level of industrial concentration. In terms of development trends, increasingly stringent global environmental requirements are driving the industry's transition towards greener and low-carbon practices. Concurrently, changes in the international trade landscape are prompting major producers to adjust their global supply chains and production layouts to enhance resilience. Opportunities for growth lie in the stable demand for high-performance rubber materials driven by continuous technological upgrades in downstream industries such as tires, as well as the potential for market expansion into emerging specialty application fields like medical products. However, the industry faces significant obstacles. Its development is closely tied to the

price fluctuations of natural rubber, often putting it under cost competition pressure. Furthermore, production technology, particularly the efficiency of catalyst systems and product consistency, remains a key challenge requiring ongoing breakthroughs within the sector.
