Cisatracurium besylate is the latest generation of muscle relaxant. Compared with the major clinical muscle relaxants, this product has the characteristics of metabolism through non-hepatic and non-renal pathways and cardiovascular stability. Atracurium is mainly used in general anesthesia, and can be widely used in endotracheal intubation, liver and kidney dysfunction, cardiovascular surgery and elderly and pediatric patients. Since the drug was first marketed in the UK in 1996, it has gradually replaced vecuronium bromide and atracurium in foreign countries and become the mainstream of clinical muscle relaxants.
