The global Citrus Fruit Coatings market size is predicted to grow from US$ 224 million in 2025 to US$ 324 million in 2031; it is expected to grow at a CAGR of 6.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Fruit coatings restore the natural coating of fruits and protect them from dehydration and post-harvest diseases. Vegetable waxes such as carnauba and animal-based waxes like shellac or beeswax are generally used as coatings on citrus fruits.

The coatings segment accounted for a major share in the post-harvest treatment market for fruits and vegetables. Edible coatings are a necessary requirement for major crops such as apples, tomatoes, and cucumbers. Their usage helps in extending the shelf life, enhancing the appearance, and delaying ripening, which has led to their demand in the post-harvest treatment market for fruits & vegetables. The market growth of fresh fruits & vegetables has also increased the demand for coatings.
