With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the City Gas Emission Monitoring System is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global City Gas Emission Monitoring System market. With recovery from influence of COVID-19 and the Russia-Ukraine War, City Gas Emission Monitoring System are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of City Gas Emission Monitoring System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the City Gas Emission Monitoring System market.

City Gas Emission Monitoring System is a system that measures and reports the greenhouse gas (GHG) emissions of a city or a community. It can help cities to identify the sources and sectors of their emissions, track their progress towards emission reduction targets, and develop effective climate action plans.

There are different methods and tools for developing a City Gas Emission Monitoring System, but one of the most widely used and accepted standards is the Global Protocol for Community-Scale Greenhouse Gas Inventories (GPC). The GPC provides a robust

framework for accounting and reporting city-wide GHG emissions, following internationally recognized principles and best practices. The GPC covers emissions from stationary energy, transportation, waste, industrial processes and product use, and agriculture, forestry and other land use.

Another type of City Gas Emission Monitoring System is a Continuous Emission Monitoring System (CEMS), which is the total equipment necessary for the determination of a gas or particulate matter concentration or emission rate using pollutant analyzer measurements and a conversion equation, graph, or computer program. CEMS are required under some of the EPA regulations for either continual compliance determinations or determination of exceedances of the standards.
