According to our (LP Info Research) latest study, the global Civetone market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Civetone is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Civetone market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Civetone are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Civetone. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Civetone market.

Civetone is a natural aromatic compound that is found in the musk of certain animals, most notably the civet cat (*Civettictis civetta*). It is one of the key components responsible for the characteristic scent of civet musk.

Historically, civetone was obtained from the glands of civet cats. These animals have scent glands located near their anus that produce a musky secretion used for marking territory and attracting mates. Civetone was highly valued in perfumery for its unique and complex aroma, often described as musky, animalic, and slightly sweet.

However, due to ethical and animal welfare concerns, the use of civetone extracted directly from civet cats is now largely prohibited in the fragrance industry. Instead, synthetic civetone, created through chemical synthesis, is used as a substitute in

perfumes and fragrances. Synthetic civetone replicates the aroma of the natural compound without the need for harvesting it from animals.
